

AI, Data & Machine Learning Enablement at a Global Financial Market Infrastructure Provider

CLIENT CHALLENGE

A global market infrastructure provider sought to integrate AI and Machine Learning into front-office operations to enhance compliance monitoring, risk oversight, and operational efficiency, while aligning with evolving MiFID II, MAR, and AI regulatory standards. Ensuring transparency, control, and readiness for AI-driven processes was critical.

OUR DELIVERY

F2B deployed a Senior Programme Manager to lead AI transformation initiatives:

- Embedded AI-driven compliance monitoring and predictive analytics into operational workflows.
- Built an AI governance framework ensuring transparency, model accountability, and regulatory alignment.

OUTCOMES DELIVERED

- ✓ Achieved a 15% operational efficiency gain through AI driven automation.
- ✓ Strengthened trade surveillance controls with AI-enabled market abuse detection.
- ✓ Implemented cloud-based data architectures improving risk reporting and oversight.
- ✓ Embedded future-proof AI model governance aligned to emerging regulatory standards.
